SUITABILITY OF RAYON PULP FOR SLURRY
STEERING PROCESS. [1961] [22]p. 6 refs.

Order from SLA \$2.60

61-16577

Trans. of Kani Parupu Gijutsu Kyokai-Shi (Japan) 1959,
v. 13, no. 95, p. 116-121.

DESCRIPTORS: *Rayon fibers, Processing, *Textiles,
*Cellulose, Wood pulp, Adhesion.

Slurry-conversion is effected readily in the case of a
fiber whose portions of long fibers are abundant, and it
progresses more the longer the slurring time is ex-
tended. Slurring and agitation resistance are in-
versely related, and agitation resistance is greater the
better the slurring is. Therefore, agitation resistance
becomes greater the longer the slurring time is, and
a pulp containing long fiber portions more abundantly
has greater agitation resistance. When classed by pulp
type, slurring is good when the degree of swelling and
